

Medicare Persons Served by APRNs

The data on persons served and the persons served percentages for the nation and each of the individual States are presented below. A longer discussion was presented in [One Strong Voice from January 2, 2013](#).

These numbers only apply to traditional fee-for-service Medicare. They do not include any Medicare enrollees in Medicare Advantage plans. They do not include fee-for-service Medicare beneficiaries who receive APRN services that are billed “incident to” physician services. They do not include fee-for-service Medicare beneficiaries that receive services from APRNs employed by hospitals or other institutional providers. There are no comparable data on Medicaid or privately insured patients who receive care from APRNs.

Note in particular that in 2011 30% of all Medicare fee-for-service beneficiaries in the United States received one or more services from an advanced practice registered nurse. (It was 26% in 2009 and 28% in 2010.)

“These important data show the increasing involvement of APRNs in caring for patients. Not only are there increases in the numbers of APRNs directly billing Medicare Part B, those nurses are providing services to an increasing number of patients in the program, representing increasing percentages of patients. In 2011, 100,585 APRNs directly billed Part B carriers for \$2.4 billion in approved charges for services provided to 10,385,355 Part B fee-for-service beneficiaries. To some observers—given Medicare Part B’s \$126 billion total budget—the APRN share may merely be Medicare dust, but it ain’t peanuts. 30 percent of patients in traditional (fee-for-service) Medicare received one or more services from an advanced practice registered nurse.

Thousands of Medicare patients in each of the fifty States are acquainted with an APRN as a source of Part B services. In most States it is hundreds of thousands. APRNs are a substantial and growing clinical presence in the Medicare program. Despite hurdles to APRNs being able to practice to the full extent of their education and experience there is an increasing patient acceptance and satisfaction with receiving Part B services from an advanced practice registered nurse. APRNs may only be nine percent of all Medicare Part B providers, but they treat more than three times that percentage of all fee-for-service patients.”
