need to know innovation resources
Innovation Guide

All nurses are gutsy, they show courage, determination, and spirit.

Nurses have to be gutsy to positively drive change across healthcare and to create future possibilities. We know that every nurse enters the innovation space in diverse ways and at various times. Our goal is to support your journey and we have curated resources to ignite your ideas, propel your work forward, and spark action.

Innovation is not for the faint of heart. We dare you to get gutsy!

As we have been working to build and define the work of innovation across the nursing profession, we recognize the importance of key characteristics and evidence that embody the spirit, culture, and science of innovation.

We believe the innovation community will be realized through the courage, values, and behaviors of the nurses who drive this work.

Nursing Ethos of Innovation

We have identified seven core principles to guide and foster the growth of innovation across nursing and healthcare:

- Transparency
- Democracy
- Abundance
- Interprofessional + Transdisciplinary Collaboration
- Antiracist + Design Justice Principles (justice, equity, diversity, inclusion)
- Improve the Present While Being Future Focused

innovation resources everyone needs to know
Design

"A framework to generate innovative solutions through creative problem solving. It involves five stages: Empathy, Define, Ideate, Prototype and Test." [website]

“Human-centered design is a problem-solving technique that puts real people at the center of the development process, enabling you to create products and services that resonate and are tailored to your audience’s needs.” [article]

“Design thinking is a human-centered approach to innovation that draws from the designer’s toolkit to integrate the needs of people, the possibilities of technology, and the requirements for business success.” [website]

Innovation

“Innovation is the ability to generate and execute new ideas—incremental, evolutionary, or revolutionary—and it starts with creativity.” [website]

“Disruptive Innovation describes a process by which a product or service initially takes root in simple applications at the bottom of a market—typically by being less expensive and more accessible—and then relentlessly moves upmarket, eventually displacing established competitors.” [website]

“Innovation can be defined as invention + adoption + diffusion. In healthcare, it may be a novel idea, product, service or care pathway that has clear benefits when compared to what is currently done. Successful innovations often possess two key qualities: they are both usable and desirable.” [article]

innovation resources everyone needs to know
There are resources, content, including organizations that are beneficial for nurse innovators to know about no matter their area of interest or focus.

These resources have been compiled into our General Innovation Resource Guide.

Our goal when creating these resource guides was to avoid redundancy and ensure unique content across all eight resources.

The creation of the General Innovation Guide is a compilation of content from all seven innovation advisory committees. We thank each committee for contributing to the advancement of nurse-led innovation.
The views and opinions expressed within these resources may not reflect the positions or policies of the American Nurses Association. The resources are provided for the sole purpose of highlighting innovative work across the nursing profession. Listing of links to organizations or groups shall not be construed as an endorsement of said organizations or groups. If you have any questions or concerns, please contact us here.
