American Nurses Association Innovation

**new care models advisory
committee innovation
advisory committee**

vision

Our committee is the premier outlet to drive nursing innovation by developing and showcasing unconventional care delivery models across the care continuum.

Care delivery of the future will be led, transformed, and informed by nurses in all spaces and places thereby improving access to care. When nurses collaborate with community partners to address social determinants of health, quality of life, health equity and life expectancy are improved.

Committee Members

Chair: Kendra Ripp, DNP, RN, CPHQ [[LinkedIn](#)]

Secretary: Latoya O'Gere, DNP, MSN/ED, RN, NE-BC [[LinkedIn](#)]

Kelly Aldrich, DNP, MS, RN-BC, FHIMSS, RYT [[LinkedIn](#)]

Danielle Schloffman, MSN, RN, NE-BC [[LinkedIn](#)]

Carmen Shaw, DNP, RN-BC, NEA-BC, CPC [[LinkedIn](#)]

definitions

Definitions

“**Social determinants of health (SDOH)** are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. SDOH can be grouped into 5 domains: Economic Stability, Education Access and Quality, Health Care Access and Quality, Neighborhood and Built Environment, and Social and Community Context.” **Source:** <https://health.gov/healthypeople/priority-areas/social-determinants-health>

“**Health equity** means the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, or other factors that affect access to care and health outcomes.” **Source:** <https://www.cms.gov/pillar/health-equity>

“**Quality improvement** is the framework used to systematically improve care. Quality improvement seeks to standardize processes and structure to reduce variation, achieve predictable results, and improve outcomes for patients, healthcare systems, and organizations. Structure includes things like technology, culture, leadership, and physical capital; process includes knowledge capital (e.g., standard operating procedures) or human capital (e.g., education and training).” **Source:** <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Quality-Measure-and-Quality-Improvement->

Care Delivery Model “On a fundamental level, the definition of nursing care delivery model is how patient care is organized or how nurses are assigned to provide patients with nursing care in health care settings” **Source:** <https://nightingaleknows.com/nursing-care-delivery-models/>

“**Reimbursement models** are the ways that the healthcare system compensates providers for patient care services. The traditional payment model is fee-for-service. Other payment models include Medicare, Medicaid, Inpatient Prospective Payment System (IPPS), Outpatient (PPS), MACRA & Other Physician Payment, Inpatient Rehabilitation Facility PPS, Home Health PPS, Hospital-Acquired Condition Reduction Program, Hospital Readmission Reduction Program, Hospital Value-Based Purchasing, Bundled Payment, Accountable Care Organizations, Patient-Centered Medical Homes, Program Integrity, Psychiatric PPS, and Federal Capital Financing.” **Source:** <https://www.aha.org/advocacy/current-and-emerging-payment-models>

Professional Practice Model “The American Nurses Credentialing Center Magnet Application Manual defines a professional practice model as “the overarching conceptual framework for nurses, nursing care, and interprofessional patient care. It is a schematic description of a system, theory, or phenomenon that depicts how nurses practice, collaborate, communicate, and develop professionally to provide the highest-quality care for those served by the organization (e.g., patients, families, communities).” **Source:** <https://www.myamericannurse.com/adapting-professional-practice-model/>

Definitions

Patient and Family Centered Care "Patient- and family-centered care is an approach to the planning, delivery, and evaluation of health care that is grounded in mutually beneficial partnerships among health care providers, patients, and families. It redefines the relationships in health care by placing an emphasis on collaborating with people of all ages, at all levels of care, and in all health care settings. In patient- and family-centered care, patients and families define their "family" and determine how they will participate in care and decision-making. A key goal is to promote the health and well-being of individuals and families and to maintain their control." **Source:** <https://www.ipfcc.org/about/pfcc.html>

"**Telehealth** is defined as the delivery and facilitation of health and health-related services including medical care, provider and patient education, health information services, and self-care via telecommunications and digital communication technologies. Live video conferencing, mobile health apps, "store and forward" electronic transmission, and remote patient monitoring (RPM) are examples of technologies used in telehealth." **Source:** <https://catalyst.nejm.org/doi/full/10.1056/CAT.18.0268>

Mobile Health "mHealth stands for mobile health which is an important part of eHealth (electronic health) where mobile phones and personal digital assistant (PDA) communication devices are used to deliver various diagnostic information to doctor, patient, and researchers." **Source:** <https://www.sciencedirect.com/topics/engineering/mhealth>

"**Remote patient monitoring (RPM)** is the collection of a wide range of health data from the point of care, such as vital signs, weight, and blood pressure. The data is transmitted to health professionals in facilities such as monitoring centers in primary care settings, hospitals and intensive care units, and skilled nursing facilities" **Source:** <https://www.cchpca.org/topic/remote-patient-monitoring/>

Wearable "In healthcare, the Wearable IoT (WIoT) is a network of patient-worn smart devices (e.g., electronic skin patches, ECG monitors, etc.), with sensors, actuators and software connected to the cloud that enable collection, analysis and transmitting of personal health data in real time. Wearable technology is widely used in healthcare to enable patient condition monitoring, therapy delivery, and more." **Source:** <https://www.scnsoft.com/healthcare/medical-devices/wearable>

Value Based Care "Value-based healthcare is a healthcare delivery model in which providers, including hospitals and physicians, are paid based on patient health outcomes. Under value-based care agreements, providers are rewarded for helping patients improve their health, reduce the effects and incidence of chronic disease, and live healthier lives in an evidence-based way." **Source:** <https://catalyst.nejm.org/doi/full/10.1056/CAT.17.0558>
